- Rehabilitation services for stroke and head trauma.
- A technologically advanced ambulatory surgery center.
- At least two medical office buildings for up to 200 physicians and their related medical and professional staffs, and
- Urgent care centers.

Through partnerships with hospitals, ambulatory surgery centers, physician groups, education and research institutions, March

Visit the shops at March HealthCare

Healthcare retail will focus on the healthcare needs of consumers that go beyond traditional boundaries and include retail products and services, for both healthy and unhealthy consumers.

So don't be surprised to visit the shops at March HealthCare and be able to walk out with hypoallergenic lipsticks, cancer books, or drop off dry cleaning. March HealthCare's retail shops will offer a lot more than what you would normally expect see in the hospital gift shop. In our retail shops expect to find anything from medical equipment and supply, pharmacy – optical, general nutrition, foot solutions, banking, dry cleaning, salons, restaurants and more. Offering this convenience is an enormous benefit to patients.

March HealthCare will be unique in that it is a comprehensive medical campus that meets the needs of patients, family members and medical professionals all within its 175-acre campus.

A patient will be able to see a doctor and then have diagnostic tests done promptly the same morning while still on campus and also get advice on nutrition or other wellness services.

For medical professionals, the centrally located services mean fewer interruptions in a day and allow more focus on patients. Physicians can see patients in offices on campus, visit patients in the hospital or the continuing care retirement community, perform surgeries and meet with their staffs all without getting into their car.

What makes the March HealthCare campus so unique:

- A new concept of health care retail that features coffee shops, banks, dry cleaning, retail shops, restaurants and even a five-star hotel.
- Patients have access to purchase medical devices and supplies and get prescriptions filled on campus.
- A Wellness Center and medical spa treatments.
- People will be able to relax in a peaceful setting between appointments or when visiting family members in the hospital or the continuing care facilities.
- There will even be shuttle buses to move people around the campus.
- Gardens that not only buffer surrounding sound but encourage the healing process.
- Research, education, and training ranging from bio-medical research to training of health pro-

fessionals,

- Community education programs on topics such as how to age healthfully, dealing with diabetes, obesity, and more, and a
- Continuum of services for seniors including independent and assisted living, skilled nursing, and Alzheimer's care.

March HealthCare also is comprehensive in its range of services, which will include:

- A 100-bed hospital, which can expand to 500 beds, that provides emergency care, intensive care, and a full range of inpatient services and outpatient services,

HealthCare is conceived as an integrated medical community that will provide healthcare throughout life. Services will range from critical care to veteran care to community care. Its state-of-the-art campus will act as the backbone for the community.

And March HealthCare already is looking to the future, with wellness, research, education and training will come together under one roof. Through education and training in concert with educational institutions like Riverside Community College, March HealthCare will bring a whole new generation of health care providers to the region. The campus' doctors will learn and practice here, and will live in the same neighborhoods as their patients.
